A little longer in the oven makes a lot of clean air!

Stelco's new battery of 83 coke ovens includes 29 units over and above those that will actually be required to meet projected requirements for coke production.

Having these extra 29 ovens permits us to extend the coking time cycle for all of our 347 ovens. A longer coking time at lower temperature results in complete conversion of coal to coke, thereby drastically reducing the level of volatile atmospheric emissions.

This way, we can keep the air a lot cleaner during the pushing of coke out of the ovens. The

extra ovens, a de-dusting system, an additional collecting main, a quenching system of baffles and recirculating water and a new cooling tower are all air and water quality control features of this new installation. In total, they constitute an expenditure of \$12 million — part of an estimated \$75 million which Stelco expects to spend by 1976 in order to fulfill the voluntary commitment it has given to the Government of Ontario to do everything reasonably possible to meet the latter's environmental quality control time tables and deadlines.

Lack of advertising... beneficial to some!

When Mark Twain was a young man, he was editor and publisher of a growing newspaper in a small Missouri town. One day he received a letter from one of his subscribers. The subscriber said that he had found a spider in that morning's edition of his paper. He wanted to know if this was an omen of good luck, or of bad luck. Mark Twain, a hustling space salesman as well as an editor, wrote to his customer:

Dear Sir:

Finding the spider in your newspaper yesterday morning was neither good luck or bad luck for you. The spider was merely looking over our paper to see which of the town's merchants is not advertising. He will then go to that store, spin his web across the door, and lead a life of undisturbed peace ever afterward.
